WORK EXPERIENCE

Fullstack developer

OOO "Original Soft"

 August 2022 - current

- Developing web applications with **ReactJS**, **TypeScript**, **ExpressJS**, and **Node.js**.
- Developed custom data tables featuring advanced filtering, multi-column sorting, dynamic column management, and one-click data copying.
- Connected to and interacted with **RESTful APIs**; integrated third-party services like **Jira** and OfficeBook.
- Designed and administered **PostgreSQL** databases using **Prisma ORM**; implemented caching solutions with **Redis**.
- Development and optimization of dashboards and data visualizations using **React Highcharts**.
- Implementation of internationalization (**i18next**) and UI theming (**Material UI**, **Styled Components**).

Frontend developer

Freelance

 December 2021 - August 2022

- Developed semantic markup with **HTML5**, styled using **CSS3** and **SCSS**, and implemented functionality with **JavaScript**.
- Design and development of web applications using **ReactJS**, **Redux (Thunk, Saga)**, **ExpressJS**, **Node.js**.
- Integration and interaction with **RESTful API**.
- Unit testing with **Jest**.
- Designed and implemented **PostgreSQL** databases with **Sequelize ORM**.

Chief Engineer

OOO "Sberbank-Srvice"

 November 2014 - April 2022

- Providing maintenance and support for user workstations, including PCs, office equipment, and POS terminals.
- Performing maintenance and support for ATMs, including software configuration and hardware component repair.
- Supported mobile workstations by installing and configuring proprietary banking software on tablets and smartphones (iOS & Android).

ABOUT ME

A passionate Fullstack Developer who loves building tools that make work easier. I specialize in creating corporate systems and internal platforms with **ReactJS**, **TypeScript**, and **Node.js**. Whether flying solo or collaborating with a team, I'm a quick learner who enjoys jumping into new challenges and finding ways to make the development process smoother. I'm a lifelong learner at heart. I'm always tinkering with new tech like **Prisma**, **Neon Postgres**, and **Redis**, diving into AI integrations, and leveling up my skills through courses from **IBM** and **Scrimba**. I'm also actively working on my English to thrive in a global environment. I'm looking for a talented team where I can channel my love for clean code and keen eye for detail into building reliable, user-friendly solutions that actually make a difference for the business.

EDUCATION

Software Developer

"Information Systems and Technologies"

DSTU

 2012

 Rostov-on-Don

SKILLS

- HTML5/CSS3/JavaScript(ES6)
- TypeScript
- ReactJS
- NextJS

Lead Engineer

PAO "Sberbank"

September 2012 - November 2014

- Configuring and setting up PCs running Windows and Linux operating systems.
- Diagnosing hardware issues and performing repairs on PCs and peripherals.
- Installing, configuring, and testing POS terminal systems.

- Redux Toolkit
- GatsbyJS
- NodeJS/ExpressJS
- MaterialUI/Ant Design/React Bootstrap
- Styled Components
- PostgreSQL
- Sequelize ORM
- SCSS
- Socket.io
- Figma/Adobe Photoshop

PROJECTS

TraceWay (Track & Trace system)

Frontend

- Built the frontend using ReactJS with TypeScript, and styled it with Material UI, React-Bootstrap, and Styled Components.
- Developed a customizable table component with dynamic column management (add/remove/sort), advanced filtering ("Select all", "Select all matching"), and clipboard data copy functionality.
- Implemented internationalization (i18n) using i18next and built a customizable theming system with Material UI and Styled Components.
- Optimized critical business logic (e.g., variable product weight calculation, equipment filtering), streamlining workflows for production staff.

Time In Status (Jira Analytics System)

Frontend, Backend

- Fullstack development using React.js (React Router 6) for the frontend and Node.js 21 with Express.js for the backend.
- Integrated a Neon Postgres database using Prisma ORM and implemented Redis caching for the employee directory.
- Developed a data import and structuring module from an external API (OfficeBook), increasing the accuracy of reports.
- Supported the application's development and maintenance, ensuring stable operation and the addition of new analytical features.

DataScan (Data Processing & Visualization)

Frontend

- Created dynamic charts and dashboards with ReactJS, TypeScript, and React Highcharts to process and visualize large volumes of data.
- Contributed to the development of new features and optimization of existing functionality, which improved performance and analytics usability.
